

# BoatSorb™

## Marine Grade Moisture Absorber & Mold/Rust Inhibitor

Preserves, Prolongs & Protects Boat Interiors

*Trusted. Proven. Safe.*

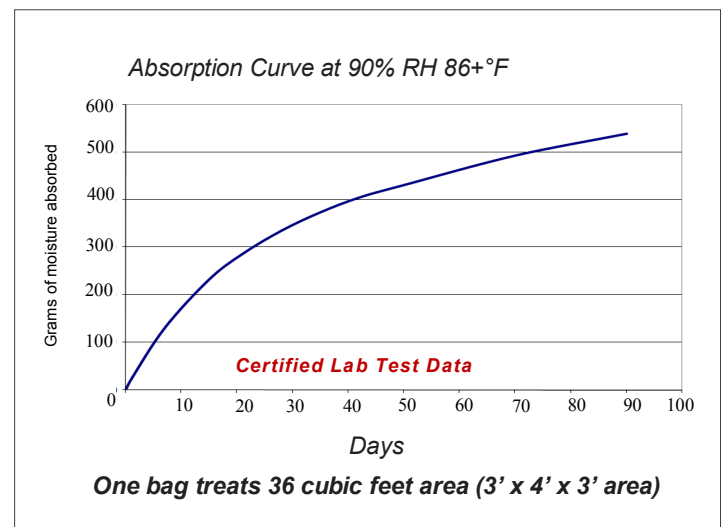

Docked boats are surrounded by water and wet items are often brought into the cabins. Sealed, covered or wrapped for extended periods, boats are also seasonally stored and these factors subject vessels to changing temperatures that create condensation. If left unregulated, condensation can cause damages to marine surfaces and interiors beyond repair.

Safeguard your powerboat, sailboat, yacht, jet ski or recreational watercraft with BoatSorb™ Moisture Absorber and Mold/Rust Inhibitor Packs. These premium pouches capture and convert moisture into dry crystal like flakes preventing potential mold, mildew or corrosion damages to interior up to 90+ days (depending on humidity). Air activated, technology automatically shuts "off" and turns "on" in the presence of moisture and pouches remain in a dry condition when desiccant reaches capacity.

Keep marine interiors, enclosures and surfaces dry and fresh! BoatSorb™ is perfect for year round or winter storage protection. Simply place appropriate number of BoatSorb™ packs throughout cabin areas and seal the cabin shut.

- \* Non-Toxic
- \* Non-Leaching
- \* Non-Corrosive
- \* Safe for all Surfaces

## Formulated to Absorb "Cargo Sweat" in Oceanic Shipping Containers

### Patented Technology Encapsulates & Crystalizes Almost 2lbs. of Moisture

BoatSorb™ maintains ideal relative humidity by removing excess moisture from the air and lowering the dew point. To increase the duration or absorption volumes, place extra packs in area to be treated! Keep all unused desiccants air tight. BoatSorb™ is safe for all enclosed areas such as automobiles, RV's, gear bags, safes, sheds, gun cabinets and more!

*Prevention is the Best Defense*

# Prevent Mold, Mildew & Rust Damage

Boat enthusiasts have spent much money and often invested considerable time preparing their treasures for the boating season. Many unfortunate boaters who live in changing weather climates have been shocked to see that mold, mildew and rust have developed in the cabin's interior during winter storage as well as during the boating season.

Moisture is a natural enemy to boat cabins, and lowering the relative humidity is critical to prevent the growth of mold and mildew. While in dead storage or moored dockside, boats are exposed to the elements and fluctuations in temperature and humidity. As the temperature and humidity fluctuate, at some point the temperature of the boat's interior materials will be lower than the dew point of the air. It is at this point that condensation begins to occur. Even if this only happens momentarily, the moisture may be enough to promote the growth of mold, mildew, and corrosive rust inside the vessel's cabin.

Simple and effective—you can trust the protection of BoatSorb™ desiccant bags. The bags eliminate moisture, so you will never see corrosive rust, mold or mildew growth and the cabin smells fresher and feels drier when taken out from storage.

## Keep Marine Cabins Clean & Dry

### ***Protecting the Things You Love ...***

*In laboratory testing each BoatSorb™ bag has been able to absorb almost 1-1/2 lbs. of moisture at 86°F or greater, at 90% relative humidity for a 90-100 day time period.*
