

CarSorb™

**Automotive Grade Moisture Absorber
& Mold/Rust Inhibitor**
Preserves, Prolongs & Protects Vehicle Interiors

Trusted. Proven. Safe.

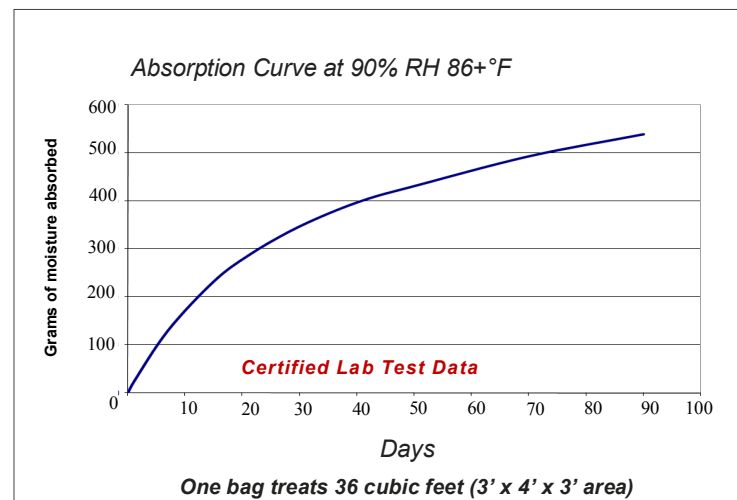

Vehicles that are sealed for extended periods or put into storage are subjected to changing temperatures that create condensation and if left unregulated, it can cause damages to automotive interiors beyond repair.

Safeguard your classic collectable or exotic muscle car with CarSorb™ Moisture Absorber and Mold/Rust Inhibitor Packs. These premium pouches capture and convert moisture into dry crystal like flakes preventing potential mold, mildew or corrosion damages to interior for up 90+ days (depending on humidity). Air activated, technology automatically shuts "off" and turns "on" in the presence of moisture and pouches remain in a dry condition when desiccant reaches capacity.

Keep car interiors dry and fresh! Perfect for automobiles stored in shed units, barns or home garages, CarSorb™ is perfect for year round protection. Simply place 1 or 2 CarSorb™ packs in front/back and 1 in trunk and seal car closed.

- * Non-Toxic
- * Non-Leaching
- * Non-Corrosive
- * Safe for All Surfaces

Formulated to Absorb "Cargo Sweat" in Oceanic Shipping Containers

Patented Technology Encapsulates & Crystallizes Almost 2lbs. of Moisture

CarSorb™ maintains ideal relative humidity by removing excess moisture from the air and lowering the dew point. To increase the duration or absorption volumes, place extra packs in area to be treated! Keep all unused desiccants air tight. CarSorb™ is safe for all enclosed areas such as automobiles, RV's, gear bags, safes, gun cabinets and more!

Prevention is the Best Defense

Prevent Mold, Mildew & Rust Damage

Car enthusiasts have spent much money and often invested considerable time restoring their treasures to their original beauty. Many unfortunate collectors who live in changing weather climates have been shocked to see that mold, mildew and rust have developed in the car's interior during storage, especially over the winter.

Humidity is a natural enemy to automotive interiors and lowering the relative humidity is critical to prevent the growth of mold, mildew and rust. While in storage, cars are exposed to changes in temperature and humidity. As the temperature and humidity fluctuate, at some point the temperature of the car's interior materials will be lower than the dew point of the air. It is at this point that condensation begins to occur. Even if this only happens momentarily, the moisture may be enough to promote the growth of mold, mildew and corrosive rust on the vehicle.

Simple and effective—you can trust the protection of CarSorb™ desiccant bags. The bags eliminate moisture, so you will never see corrosive rust, mold or mildew growth and the cars will feel dryer and smell fresher when taken out from storage.

Keep Vehicles Clean & Dry

Protecting the Things You Love...

In laboratory testing each CarSorb™ bag has been able to absorb almost 2lbs. of moisture at 86°F or greater, at 90% Relative Humidity for up to a 90 day time period.

Protecting Automobile Interiors from Moisture Related Damages
